Being obese puts a person at greater risk for chronic illness, including coronary heart disease, high blood pressure, stroke, type 2 diabetes, cancer, and reproductive problems.

Coronary heart disease is the leading cause of death for both men and women.

29 million Americans suffer from diabetes and are at higher risk of heart disease, stroke, blindness, kidney failure, and lower limb amputation.

15.7 million adults reported having at least one major depressive episode in the past year.

Obesity costs the U.S. $190 billion each year.

Spending more time in parks translates to being more physically active.

Outdoor activity improves both mental and physical well-being more than indoor activity.

Spending time in nature decreases anxiety and negative thinking and lowers levels of depression and stress.

Spending time in nature helps to decrease high blood pressure.

Spending time in nature is associated with better cognitive development in schoolchildren.

Diabetics who spend more time in nature are more physically active and show better blood sugar control.

The closer we are to green space, the less we suffer from cardiovascular, musculoskeletal, mental health, respiratory, neurological, and digestive diseases.
